DECLARATION

The project titled "**SAP ABAP Solutions for Sales and Distribution Sector: Smart Forms, ALV Reporting, and Submit Report** " has been mentored by **Mr. Santhosh pal** and organized by SURE Trust from Nov 2025 to April 2026. This initiative aims to benefit educated unemployed rural youth by providing hands- on experience in industry- relevant projects, thereby enhancing employability.

I, **Ms. P. Harathi**, hereby declare that I have solely worked on this project under the guidance of my mentor. This project has significantly enhanced my practical knowledge and skills in the domain.

EXECUTIVE SUMMARY

This project focuses on the development of an **SAP ABAP-based solution for Sales and Distribution Sector**, integrating Smart Forms, ALV reporting, and SUBMIT functionality to provide an end-to-end reporting system.

The solution utilizes standard SAP tables such as EKKO, EKPO, EKET, and LFA1 to retrieve and process purchase order data. An interactive **ALV (ABAP List Viewer) report** was developed to display key information like material details, vendor name, ordered quantity, received quantity, and calculated open quantity. The report includes user-friendly features such as a custom option to **download the output in Excel format** for offline analysis and reporting.

To enhance navigation and usability, interactive functionalities were implemented. Users can perform actions such as double-clicking on a purchase order to directly navigate to the standard SAP transaction **ME2M** for detailed display. Additionally, the **SUBMIT statement** is used to integrate and execute standard SAP reports dynamically, ensuring seamless interaction between custom and standard functionalities.

Furthermore, **Smart Forms** were designed to generate professional and structured output documents. These forms present the data in a clear tabular format, including organizational details, proper layout design, and formatting suitable for business documentation.

Overall, this project demonstrates the effective use of core ABAP concepts for data retrieval such as **ALV reporting, Smart Forms, and system integration using SUBMIT**. It provides a practical and scalable solution for efficient purchase order monitoring, reporting, and documentation within an SAP environment.

INTRODUCTION

Enterprise data analysis and reporting are essential for effective decision-making in Data Retrieval and Representing. Traditional methods often lack interactivity, real-time insights, and efficient data handling. To address these challenges, this project develops an **SAP ABAP-based reporting solution** integrating **ALV reports, Smart Forms, and SUBMIT functionality**.

The application retrieves data from standard SAP tables and presents it through an interactive **ALV report** with feature like **Excel export**. Additionally, **Smart Forms** generate structured and professional documents, while SUBMIT enables seamless integration with standard SAP reports.

Overall, the solution enhances **data visibility, reporting efficiency, and user experience**, demonstrating key ABAP concepts in a practical and scalable manner.

Background and Context:

Modern organizations rely on integrated systems to manage procurement and supply chain data efficiently. While SAP ERP provides standard features, **custom ABAP development** enables tailored solutions for specific business needs. Traditional reporting often lacks **interactivity, real-time insights, and efficient document generation**.

This project addresses these gaps using **ALV reporting, Smart Forms, and SUBMIT functionality**. It provides structured **Purchase Order Analysis, and Vendor Details** along with features like **Excel Export and Navigation to Standard Transactions**, delivering an efficient and user-friendly reporting solution within SAP.

Problem Statement:

Managing purchase order data requires accuracy, real-time access, and efficient reporting. Existing processes often face challenges such as:

- Difficulty in analysing data from multiple tables (EKKO, EKPO, EKET, LFA1).
- Lack of easy export options for sharing data in structured formats.
- Inefficient document generation for official reporting purposes.

The challenge is to develop a system that provides:

- A **structured approach** to retrieve and consolidate data from multiple SAP tables.
- **User-friendly interfaces** for data entry and updates.
- **Professional documentation** using smart forms with branding and structured layouts.
- **Interactive ALV reports** with export feature.
- **SUBMIT-based integration** enabling seamless navigation to standard SAP transactions.

Scope:

The project focuses on developing an **SAP ABAP-based reporting and analysis system** with the following key elements:

1. **ALV Report Development** – Interactive report for Purchase Order analysis using data from standard tables (EKKO, EKPO, EKET, LFA1) with Excel download functionality.
2. **Smart Forms** – Professional document generation for representing data with structured layout and formatted output for business reporting.
3. **SUBMIT Integration** – Execution and integration of standard SAP reports with seamless navigation to standard transactions

Innovation:

This project introduces several innovative elements that enhance efficiency, usability, and reporting capabilities within SAP:

1. **Interactive ALV Reporting** – Provides Excel Download functionality and real-time insights for better analysis of purchase order and procurement data.
2. **Excel Export Functionality** – Enables quick and structured download of ALV report data for external analysis and sharing.
3. **Smart Forms for Professional Reporting** – Generates well-structured and formatted documents suitable for official business use.
4. **SUBMIT-Based Integration** – Allows seamless execution of standard SAP reports and smooth navigation to transactions like ME2M.
5. **End-to-End Reporting Solution** – Covers the complete workflow from data retrieval and processing to interactive display and document generation.

By integrating these features, the solution provides a **scalable, efficient, and user-friendly framework** for data analysis and reporting within SAP.

PROJECT OBJECTIVES

Project Objectives and Expected Outcomes

Objectives

1. Professional Reporting with Smart Forms

Design Smart Forms to generate structured and well-formatted documents for procurement data, suitable for official business use.

2. Develop Interactive ALV Reporting

Create an ALV report for purchase order analysis with features like Excel export functionality.

3. Integration using SUBMIT and Navigation

Use SUBMIT functionality to execute standard SAP reports and enable seamless navigation to transactions like ME2M.

4. Efficient Data Retrieval and Processing

Extract and analyze procurement data from standard SAP tables (EKKO, EKPO, EKET, LFA1) to provide accurate insights.

Expected Outcomes

- A Professionally formatted **Smart Forms** for structured business documentation.
- Interactive **ALV reports** with Excel download capability.
- Seamless integration with standard SAP reports using **SUBMIT**.
- Improved **data visibility, accuracy, and reporting efficiency**.
- A scalable SAP ABAP solution for representing & seamless data entry and updates.

Deliverables

- **Smart Forms:**

Custom-designed Smart Forms for representing data, providing structured and professional document output suitable for business reporting.

- **ALV Report with Excel Download:**

Interactive ALV report for purchase order analysis using data from standard tables (**EKKO, EKPO, EKET, LFA1**), with features like **Excel export functionality**.

- **SUBMIT-Based Report Integration:**

Implementation of **SUBMIT functionality** to execute standard SAP reports and enable seamless navigation to transactions such as **ME2M**.

1. Documentation and User Guides

- Technical documentation covering **ALV report logic, Smart Forms design, and SUBMIT integration.**
- User manual explaining **selection screen usage, ALV navigation, Excel download, and Smart Form outputs.**

2. Testing Reports

- Validation testing for data retrieval from **EKKO, EKPO, EKET, LFA1** tables.
- Functionality testing for **ALV reports, Excel export, Smart Forms output, and SUBMIT execution.**

3. SUBMIT Execution Flow

When you run the custom report program:

1. Data Selection

- User enters input values (e.g., **Material Number, Plant**) on the selection screen.

2. ALV Report Generation

- System retrieves and processes purchase order data.
- Displays output in an **interactive ALV report** with calculated fields like Open Quantity and Status.

3. SUBMIT Integration

- The program executes a standard SAP report using **SUBMIT** with the given inputs.
- The standard report runs via selection screen and returns to the custom report.

4. Navigation Feature

- On double-click, user is redirected to **ME2M** to view detailed purchase order information.

METHODS/TECHNOLOGY USED

Project 1: Smart Forms

Objective:

To design a Smart Form:

- Business Data Smart Form (INVOICE)

Features Implemented:

- Company Logo
- Header Section with title
- Page Numbering
- Tabular format for data display
- Work Area & Internal Table usage for data handling
- Template for structured layout
- Signature Box for authorization

Tables used:

- 1. BUT000 - Business Partner General Data I (Standard Table)
- 2. KNA1 - General Data in Customer Master (Standard Table)

Program Development:

- Created a Z program ZBUSINESS_46 in SE38.
- Declare structures, internal tables and work areas
- Retrieved data using SELECT statements from standard tables

Execution:

- Smart form is generated into a Function Module automatically
- Integrated with report program for dynamic data display (SE38)
- Sample ABAP code for CALL FUNCTION

Result: Business Invoice Smart Form

Project 2: ALV Report with Excel Download

Objective:

- To display **material document data** in an ALV report.
- To provide functionality to download the report into an **Excel file**.
- To enable dynamic file selection using a **file save dialog**. Allow the user to choose the file path and name dynamically.

Method:

- Selection Screen → Input using **SELECT-OPTIONS (S_MBLNR)**
- Data Source → **MSEG**
- ALV Display → Function Module **REUSE_ALV_GRID_DISPLAY**
- GUI Interaction → **PF-STATUS & USER_COMMAND**
- Excel Download → **GUI_DOWNLOAD** with file separator

Steps:

- Create report program in SE38 (**Z_MSEG_MP46**)
- Define selection criteria using **S_MBLNR**
- Fetch data from **MSEG** table into internal table
- Display output using **REUSE_ALV_GRID_DISPLAY**
- Add custom PF-STATUS (**ALV_STATUS46**) with Excel button
- Handle user action in **USER_COMMAND**
- Use **CL_GUI_FRONTEND_SERVICES=>FILE_SAVE_DIALOG** for file selection
- Download file using **GUI_DOWNLOAD**
- Display success message after download

FIG.2.3 Student ALV Report

Project 3: SUBMIT Report

Objective:

- To develop an interactive **ALV-based Purchase Order Report**.
- To retrieve and analyze data from EKKO, EKPO, EKET, and LFA1 standard tables.
- To implement navigation and integration with standard SAP transaction using SUBMIT and CALL TRANSACTION.

Selection Screen Design:

- User inputs:

Material Number (**MATNR**)

Plant (**WERKS**)

- Enables filtering of purchase order data dynamically.

Flow / Working:

Data Retrieval

System fetches data from:

- **EKKO** → Purchase Order Header
- **EKPO** → Purchase Order Item
- **EKET** → Schedule Line (Goods Received Quantity)
- **LFA1** → Vendor Master Data

Combines data into an internal table structure.

ALV Report Display:

- Displays output using **CL_SALV_TABLE (ALV Grid Display)**

Features:

- Optimized column display
- Standard ALV functionalities enabled (sorting, filtering, export)
- ◆ **Interactive Feature (Double Click Event)**
 - On double-click of any row:
 - Navigates to Display Purchase Order Transaction (ME2M)
 - Uses SET PARAMETER ID to pass Purchase Order number
- ◆ **SUBMIT Functionality (Integration)**

After displaying ALV:

- Program triggers standard SAP report using:

SUBMIT RM06EM00

- Passes:
 - Material Number
 - Plant
- Executes via selection screen and returns to custom report

Result: Submit Report

SUBMIT REPORT

LEARNING AND REFLECTION

Learning and Reflection:

Working on these SAP ABAP projects has been a valuable learning experience, giving me hands-on exposure to key concepts like **Smart Forms, ALV reporting, and SUBMIT-based integration**. These projects helped me understand how technical development in ABAP directly supports real business processes, especially in procurement and reporting.

Some of the key learnings include:

- **Smart Forms:** Designing Smart Forms helped me understand how to convert raw data into **structured, professional documents**. I learned layout design, table formatting, and how to integrate forms with ABAP programs using function modules.
- **ALV Reporting:** I learned how to build interactive reports using ALV, implement event handling, and enhance usability with **Excel download functionality**. This showed me how powerful ALV is for business users.
- **SUBMIT and Navigation:** I gained knowledge of integrating custom programs with **standard SAP reports using SUBMIT**, and enabling navigation to transactions like **ME2M** using parameter IDs. This highlighted how custom and standard SAP functionalities can work together.
- **Data Processing and Integration:** Working with standard tables like **EKKO, EKPO, EKET, and LFA1** improved my understanding of data retrieval, and business logic implementation such as calculating open quantities and status.

Overall, these projects strengthened my ability to **analyze requirements, design solutions, and implement them in SAP ABAP**. They also gave me confidence in building practical, user-friendly applications that improve reporting efficiency and business decision-making.

Experience:

The overall experience was both challenging and rewarding. Initially, understanding data retrieval and report logic was difficult, but I gradually became comfortable with ABAP concepts.

Working on **ALV reports** helped me learn interactive features and Excel download functionality, while **Smart Forms** gave me insight into creating professional documents. Implementing **SUBMIT and navigation to ME2M** improved my understanding of integrating custom and standard SAP programs.

Overall, the project enhanced my **technical, problem-solving, and debugging skills**, and increased my confidence in handling SAP ABAP development independently.

Looking back, the entire process not only improved my ABAP skills but also my problem-solving and debugging skills. Every error taught me something new, and by the end, I felt more confident about handling projects independently.

CONCLUSION AND FUTURE SCOPE

Conclusion:

These projects provided a strong foundation in **SAP ABAP**, covering key areas like **ALV reporting, Smart Forms, and SUBMIT integration**. Each component helped me understand how real-world SAP reporting and data processing works.

Overall, I gained hands-on experience in building practical solutions and improved my ability to develop efficient, user-friendly applications. This experience has prepared me to take on more advanced challenges in SAP ABAP development.

Additionally, this project enhanced my understanding of how **technical solutions align with business requirements**, making me better equipped to deliver value-driven SAP applications.

Future Scope:

If extended further, this project can be enhanced in several ways:

- Adding advanced validations and search helps to improve data accuracy and usability.
- Enhancing ALV reports with **charts, dashboards, and advanced analytics** for better insights.
- Upgrading **Smart Forms to Adobe Forms** with features like digital signatures and barcodes.
- Improving report interactivity with more dynamic navigation and user-friendly features.
- Exploring modern integration techniques like **BAPIs and APIs** for better system connectivity.
